

# Product Bulletin

*The Power of Combined Excellence*

Bulletin No.: PB-003

Date: 8/14/2012

Topic: White to Parker Motor Change

Product Models:  
20560  
20572  
20584

Effective Serial Number:  
1231001 and higher

## Summary

This document covers the recent upgrade to our SB Series collector sweeper. The upgrade includes an enhanced motor configuration for improved performance and reliability.

## Detail:

The White motor p/n: 03-5613 has been replaced by the Parker motor p/n: 03-6335. The Parker motor has a peak pressure rating of 4350 psi compared to 3000 psi on the White. The torque rating of the Parker is 8100 at 25 gpm/2500 psi and the White comes in at 7291 at 25 gpm/2500 psi. A more robust bearing package is also standard on the Parker which withstands greater side loads. For field replacement of the White motor, a guard will be shipped also (13-17046) due to the fact that the Parker motor is 2.52" longer than the White motor was.
